## Facts About Invisalign

1. Invisalign enables you to smile during as well as after treatment with confidence, as many people will never even realise you are wearing it.
2. Invisalign consists of a series of clear removable aligners, which gradually move your teeth without the need for metal wires or brackets.
3. Invisalign Aligners are custom made through our accredited expertise and computer imaging technology.
4. The four main advantages of Invisalign are:
  - ***Virtually invisible*** – no one will even know you are wearing it!
  - ***Removable*** – Invisalign will not impact your dietary or oral hygiene habits. You can eat and drink, brush and floss normally to maintain optimal dental hygiene.
  - ***Comfort*** – Requiring no metal brackets or wires, Invisalign reduces mouth irritation and oral sores generally associated with traditional braces. This also means you will spend less time in the dental chair.
  - ***See your future smile before you begin treatment*** – Using the latest computer technology you can view your straight teeth on the monitor before you even commence treatment.
5. You will change your Invisalign aligners approximately every two weeks or as recommended by the Dentist. Your teeth will then move little by little, towards the smile you have always wanted.
