Facts About The Waterlase Dental Laser

1. The Waterlase Dental Laser may help to eliminate fears of the Dentist and / or dental treatment, as it eliminates the need for the drill and anaesthesia needles in many cases.
2. Requiring no direct contact with your teeth and sometimes even your gums; the Waterlase Dental Laser is extremely gentle and does not create heat or vibration.
3. The Waterlase Dental Laser may be used to assist in numerous dental treatments. Some of these treatments include;
 - Decay Removal
 - Cavity Preparation
 - Root Canals
 - Smile Design and correction
 - Soft Tissue Procedures
 - General Dentistry Procedures
 - Desensitisation
4. This innovative treatment method utilises working water energy to prepare teeth.
5. There is little or no bleeding after treatment with the Waterlase Dental Laser.
6. Patients do not experience the sound or effects usually felt during drilling.
